## PLANER MECHANISATION

### FULLY AUTOMATED SAWN TIMBER PROCESSING

KALLFASS designs a high-performance, fully automated planing mill based on innovative plant technology with process solutions that are optimised for all interfaces. The integrated control and safety concept ensures a perfect production process with a high degree of automation and maximum safety for the operating personnel.

### COST-EFFECTIVE SOLUTIONS FOR A **CONSISTENTLY HIGH** PLANT PERFORMANCE

When using vacuum lifters or tilting platforms whilst destacking drying packages, a **STICK SCANNER**, detects whether sticks are on a layer. If this is the case, the scanner passes this information to a **STICK STRIPPER**, which subsequently drives across the layer. Before planing, an integrated **MOISTURE, STRENGTH** and **WARP MEASUREMENT** with a **TURNING DEVICE** ensure perfect planing results. The sawn timber's quality can be evaluated automatically using a **QUALITY SCANNER** and/or manually using an **ASSESSMENT CHAIN CONVEYOR**. These are all mechanisation solutions that enable consistent plant performance at the highest level.
